

SPINETIX

Welcome your customers while you protect them as well as your assets!

Turn the Confrontation Screen at store entrance into a Welcome Screen by integrating Live Video with Digital Signage.

Retailers are going digital to improve customer experience and provide a true omni-channel shopping. Screens with digital ads are raising awareness and sales. Adding live videos elevates the experience even further as visitors are becoming captivated and engaged. It creates a human and appealing environment. **The shop becomes a smart-shop: dynamic, real-time and connected.**

Axis and SpinetiX have teamed up to create a powerful and smart streaming solution to innovate the Public View - or Confrontation Screen. By combining the Axis network cameras with SpinetiX HMP players the screen at shop entrance turns into a Welcome Screen.

This smart streaming solution allows retailers to include security as part of their aesthetically pleasing in-store-communications.

The HMP player gets the live stream directly from the door-facing Axis network camera and displays it on the Welcome Screen. This solution does not require any PC nor additional cabling.

HMP player can display multiple types of information such as live videos, audio, texts, images, etc. These elements can be dynamically positioned, re-sized and edited to display one of the following:

- > Shop entrance live video for theft prevention
- > Real-time announcements
- > Local sales promotions
- > Smart way finding
- > Welcome messages
- > Opening hours
- > Staff photos
- > Emergency and safety alerts

- > Local weather forecast
- > Local transportation timetable
- > And much more powered by 150+ customizable widgets

Furthermore, to make it relevant and targeted to the shopper, HMP players handle event triggering from the Axis network camera, allowing screen content to change based on pre-defined shop scenarios. For example, every 10th visitors can be rewarded with a coupon triggered by the connected people counter.

The solution fits shops of any size and is scalable for any number of screens and any number of shops. The HMP player is based on open standards and can be seamlessly integrated to any existing and future architecture.

Axis and SpinetiX help to create an engaging smart shopping experience with in-store-communication that matters to customers making them more loyal.

> Low latency streaming

> Live videos: any size and positioned freely

> 150+ widgets to display dynamic content

> High reliability, doesn't require PC

> Plug & Play installation
